

A scenic view of a river with a drawbridge and a building with a red roof, surrounded by autumn foliage. The text is overlaid on the image.

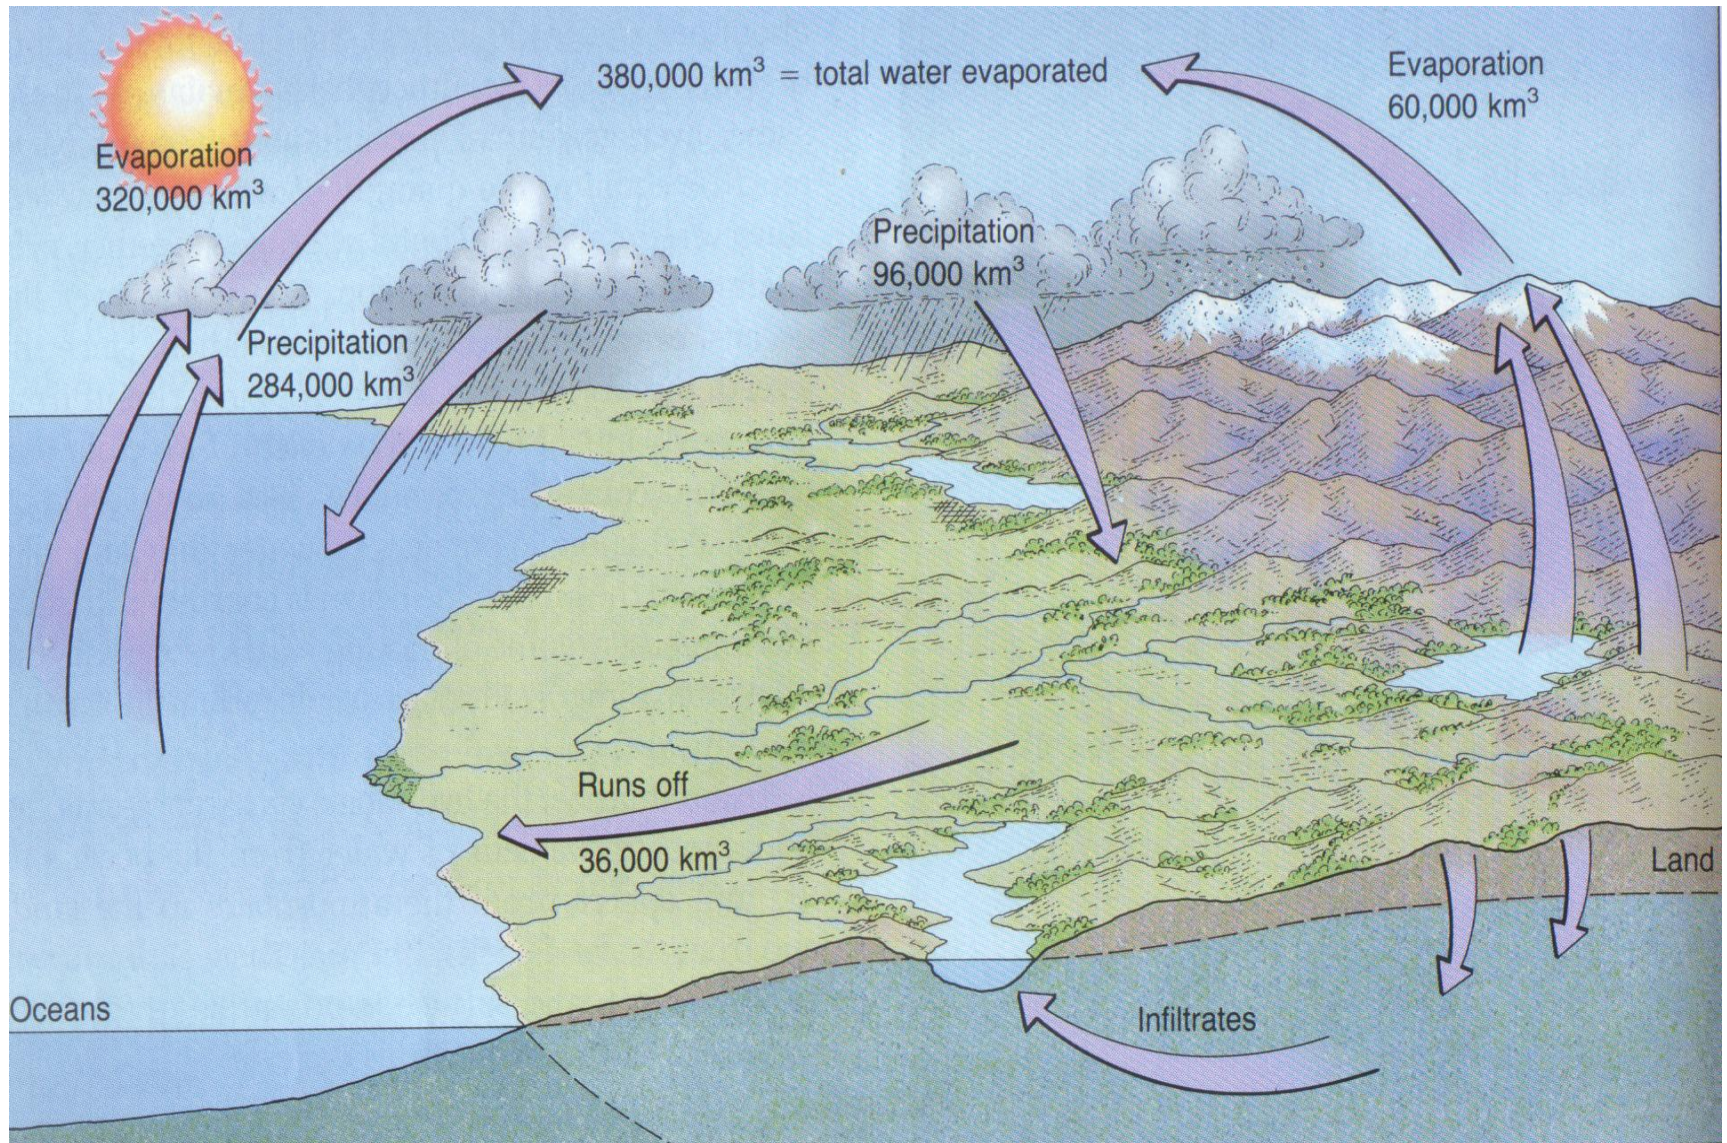

# Conservation 101

Karen Kill  
Washington Conservation District

MACDE  
2007 Annual Meeting &  
Conference

# The Water Cycle

# Lakes

- Transparency
- Nutrients
- Algae
- Temperature
- Dissolved Oxygen

# Lake Monitoring Equipment

# Zooplankton Monitoring

Enlarged *Daphnia pulicaria*

Color = 10 Pt-Co  
Chlorophyll = 14

Color = 20 Pt-Co  
Chlorophyll = 245

# Streams

- Flow
- Temperature
- Oxygen
- Nutrients
- Sediments

# How does groundwater interact with lakes?

## 1. Perched Lakes

Generally small in area and/or shallow

# How does groundwater interact with lakes?

## 2. Recharge Lakes

Likely source of water to regional surficial aquifer

# How does groundwater interact with lakes?

## 3. Flow-Through Lakes

“surface expression” of water table

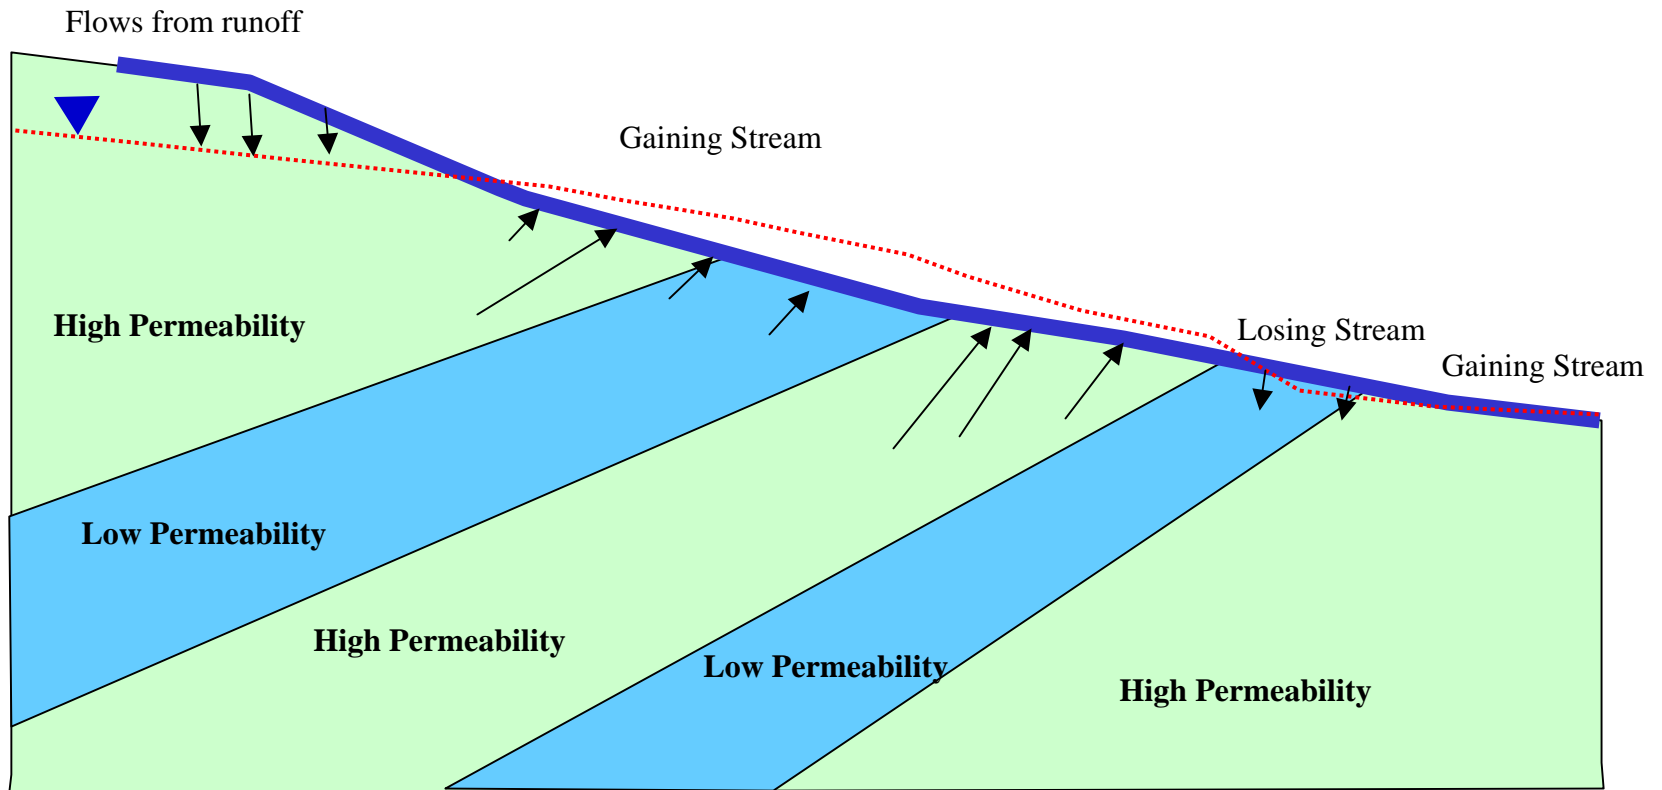

# How does groundwater interact with lakes?

## 4. Discharge Lakes

Net inflow of groundwater

# How Groundwater Contributions Flow to a Stream: Role of Geology

# Wetlands: How to recognize them

## Wetland Criteria

- Hydric soils – soils showing evidence of prolonged saturation
- Hydrophytic vegetation – plants adapted to wet conditions
- Saturation or inundation (evidence of water) – long enough to affect soils and vegetation

# Wetland boundary

Permanently/  
semi-  
permanently  
flooded area

Delineated  
edge

Type 1 – flooded temporarily

Type 2 – saturated soil  
much of year

Type 4 – deep marsh

Type 6 – Shrub swamp

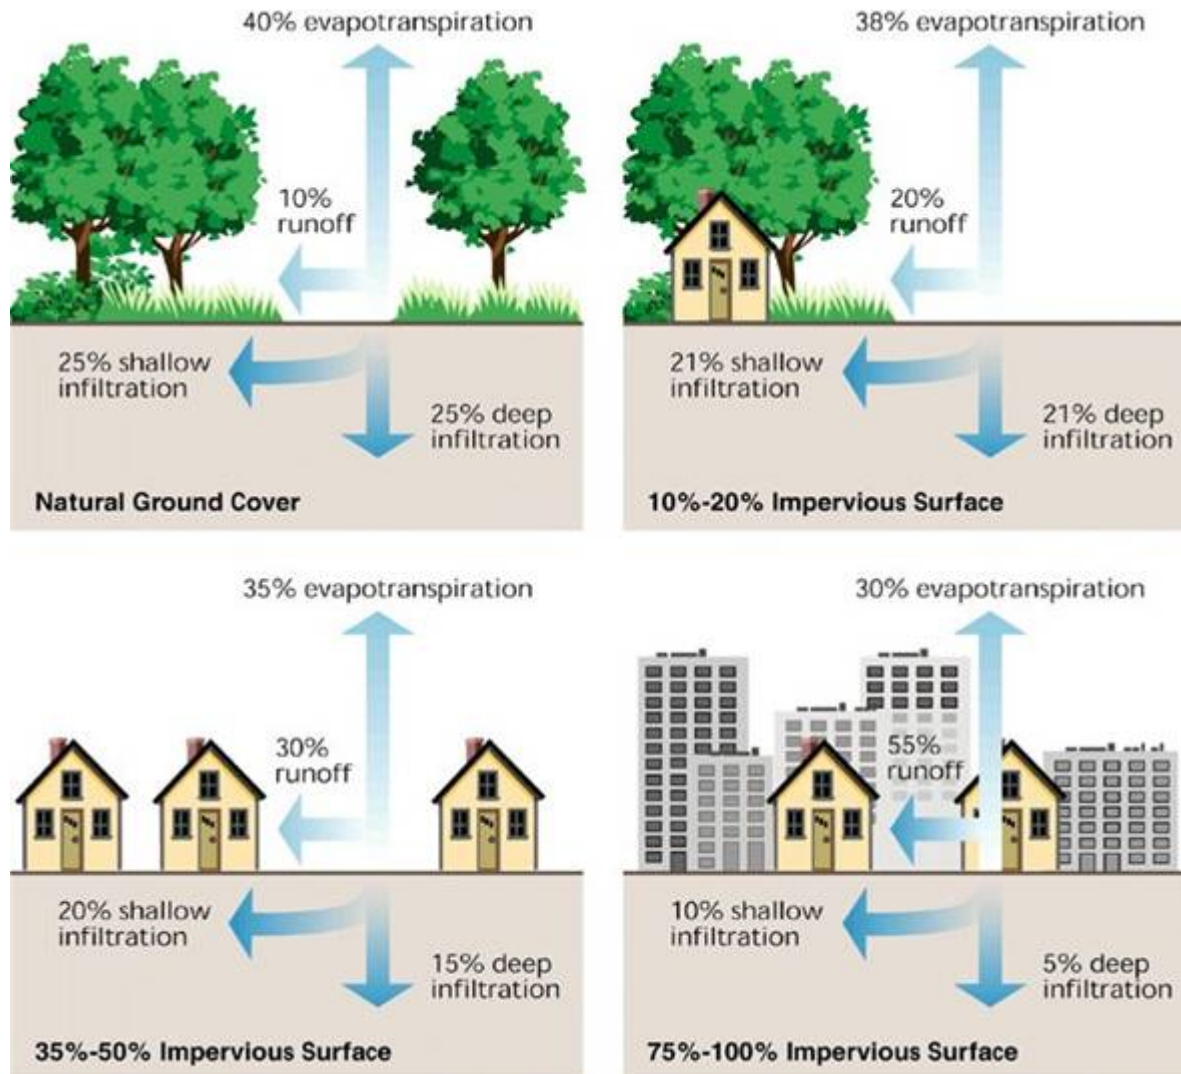

# Bottom line on Wetlands

- No excavation in wetlands
  - Regulated activity
  - Not suitable for raingardens
- Revegetation with native species is okay
- Call local SWCD for assistance in determination of wetland or not

# Environmental Impacts of Conventional Urban Development

**INTENSITY OF LAND USE**

**AMOUNT OF IMPERVIOUS SURFACE**

**POTENTIAL WATER QUANTITY & QUALITY PROBLEMS**

Even your home has a big impact on stormwater runoff

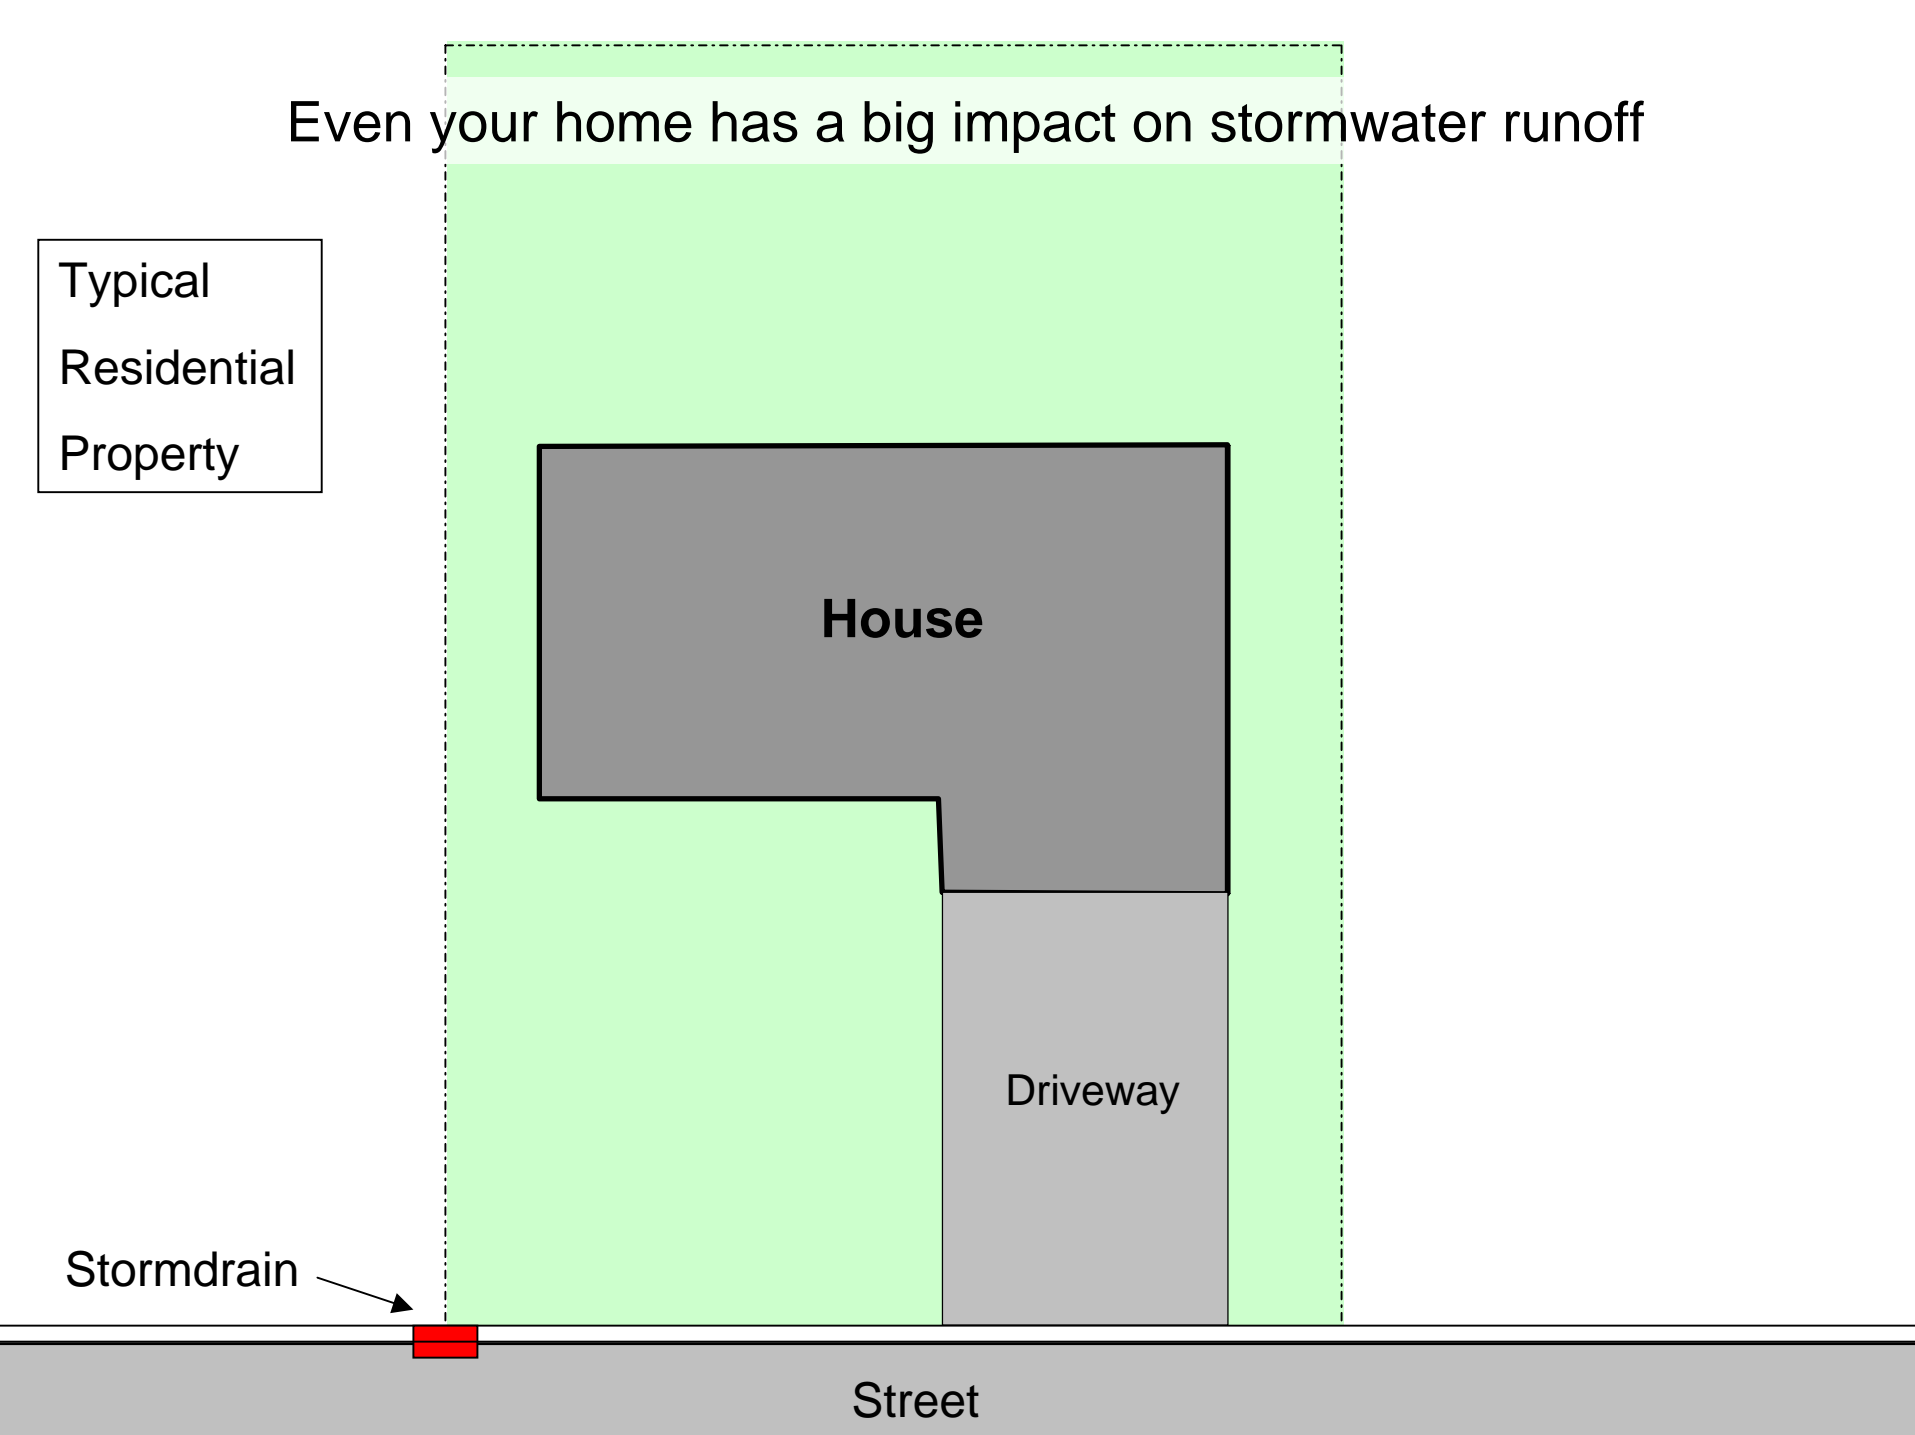

Typical  
Residential  
Property

House

Driveway

Stormdrain

Street

Typical  
Residential  
Property

+ “Green Concrete” Compacted Lawn

8,390 s.f. “impervious” x 1” rain  
(if infiltrates first  $\frac{1}{4}$ ” of rain)

**= 3,880 gallons of runoff**

1,500 s.f. house (& patio) x 1” rain  
**= 925 gallons of runoff**

1,000 s.f. driveway x 1” rain  
**= 617 gallons of runoff**

In a 1” rainfall  
Potential Runoff:  
**5,422 gallons**

with 23” yearly  
precipitation  
Potential Runoff:  
**124,706  
gallons/yr**

Stormdrain

Street

**Where can the rain soak in?**

Bloomington

# Stream Impacts of Impervious

One pound of phosphorus = 500  
pounds of algae

# What is a Total Maximum Daily Load (TMDL)?

A Formula and Process, which will tell you...

the maximum amount of  
a specific  
pollutant that can be  
discharged to a  
waterbody and still  
meet water quality  
standards

# *One Problem: Conventional Site Design*

*Collect*  
*Concentrate*  
*Convey*  
*Centralized*  
*Control*

*Engineered Drainage*

To Storm Drain

**Storm Drain**

**Gunk\***

**Piped directly to Wetland,  
Lake or Stream**

**\* Gunk= sediment, nutrients, bacteria, organic matter, oil, heavy metals, etc.**

**Increased amounts of runoff with  
sediment, nutrients and pollutants can  
disrupt natural processes**

Did you know: One quart of motor oil can contaminate 250,000 gallons of water

**Increased amounts of runoff with sediment, nutrients and pollutants can disrupt natural processes**

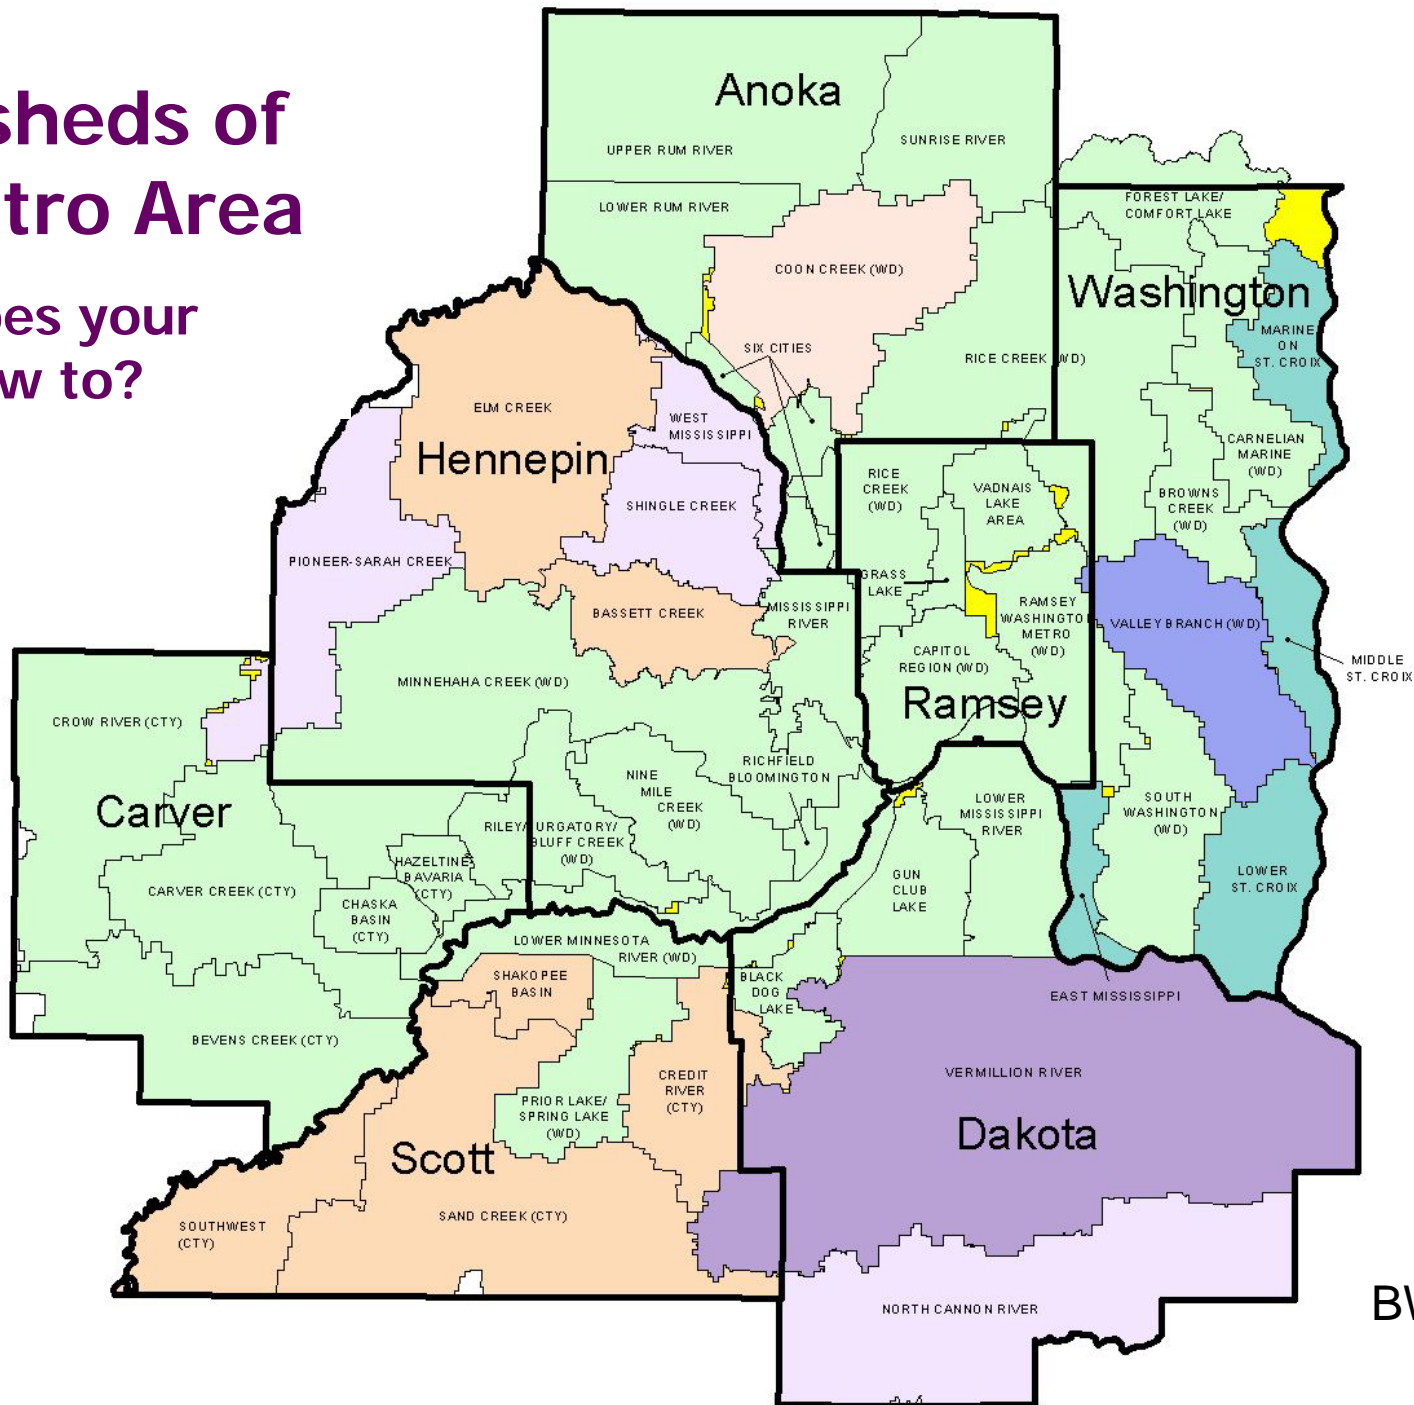

Como Lake

# Watersheds of the Metro Area

Where does your runoff flow to?

BWSR

# What are BMPs?

- Best Management Practices –
  - Ways in which we try to minimize our impact on the environment.

# Low Impact Development

## LID PRINCIPLES

# Use existing natural systems as the integrating framework for site planning

- Land use planning and watershed planning
- Identify environmentally sensitive resources: wetlands, mature trees, slopes, drainageways, permeable soils, waterway buffers
- Assess existing hydrology
- Define a development envelope

# LID PRINCIPLES

## Focus on prevention

- Minimize clearing and grading
- Cluster buildings and reduce building footprints
- Reduce road widths, use shared driveways, reduce parking area
- Align roads to minimize impact
- Use green rooftops
- Use permeable paving

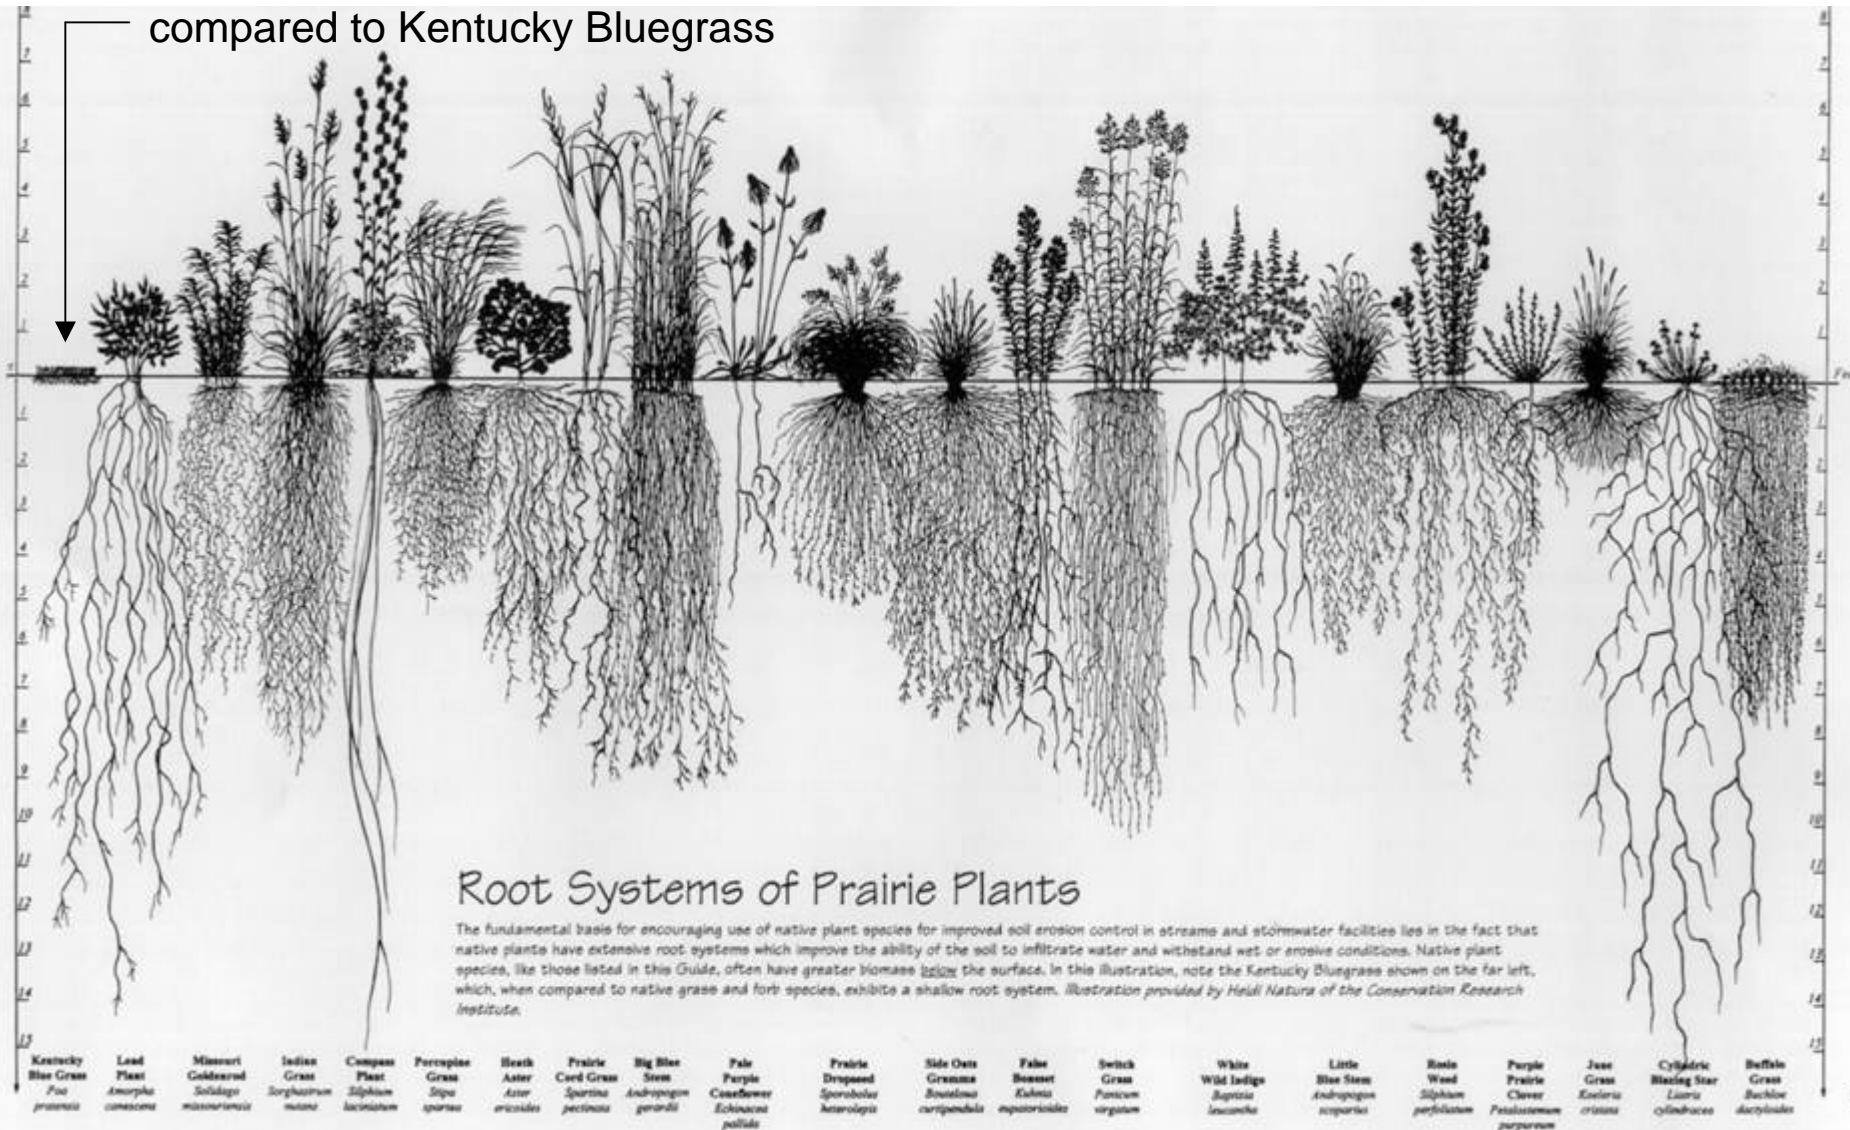

*Native Gardens      Raingardens*  
*Native Shoreline Stabilization*

# Roots of Native Prairie Plants

compared to Kentucky Bluegrass

# What are Rain Gardens?

- Shallow vegetated areas that are usually dry
- Use deep-rooted vegetation
- Designed to filter polluted runoff and enhance groundwater recharge
- Provides wildlife habitat
- Landscape amenity

# Why Raingardens?

City of Burnsville

Designed by: Barr Engineering

8. 2. 2004

# Raingardens

## (Capturing Rainwater / Stormwater )

Just like a regular planting, but able to  
absorb rainwater and breakdown pollutants

Where would you put a raingarden?

Total Rooftop Drainage Area = 660 sq ft

$660 \times 10\% = 66$  sq ft Raingarden Area

**66 sq.ft. = 6' x 11' Raingarden**

**Where would you put a raingarden?**

# Como Lake Parking Lot Raingarden

## Project Goal:

- filter & infiltrate parking lot runoff
- education opportunity for local residents / park users

Existing mown grass swale in parking lot area drainage area

**Sediment Logs  
(wood-fiber)**

**Shredded Wood  
Mulch**

**Erosion-Control Blanket  
(coconut-fiber)**

May 10, 2002

**Shredded Wood  
Mulch**

**Beehive  
Inlet**

**Sediment Logs  
(wood-fiber)**

# Why Native Shoreline Restorations?

## Value / Function of Un-molested Shoreland Zone

### Shoreland Vegetation

(erosion-control, water quality, wildlife habitat, high plant diversity = high wildlife diversity)

### Emergent Vegetation

(water quality, erosion-control & wildlife habitat)

### Tree Stumps

(wildlife habitat & water quality)

### Drifted-in Logs & Snags

(wildlife habitat, erosion control & water quality)

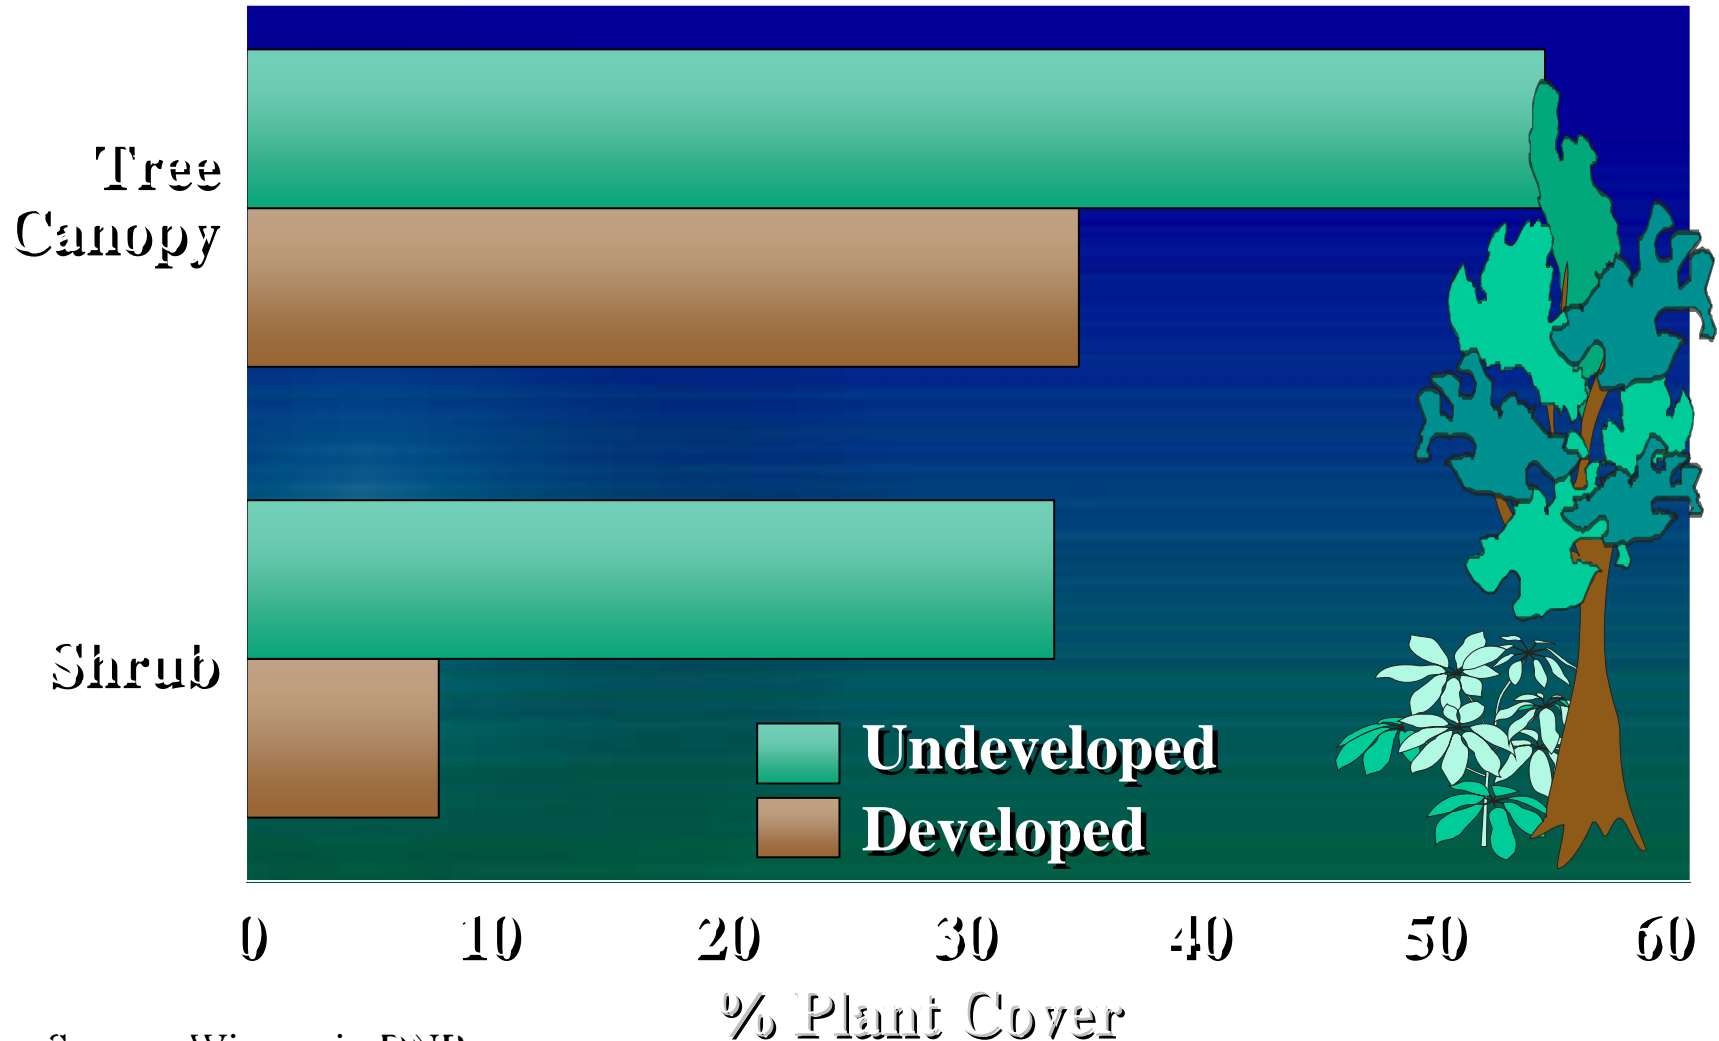

# What's Happened to Shoreland Plants?

Source: Wisconsin DNR

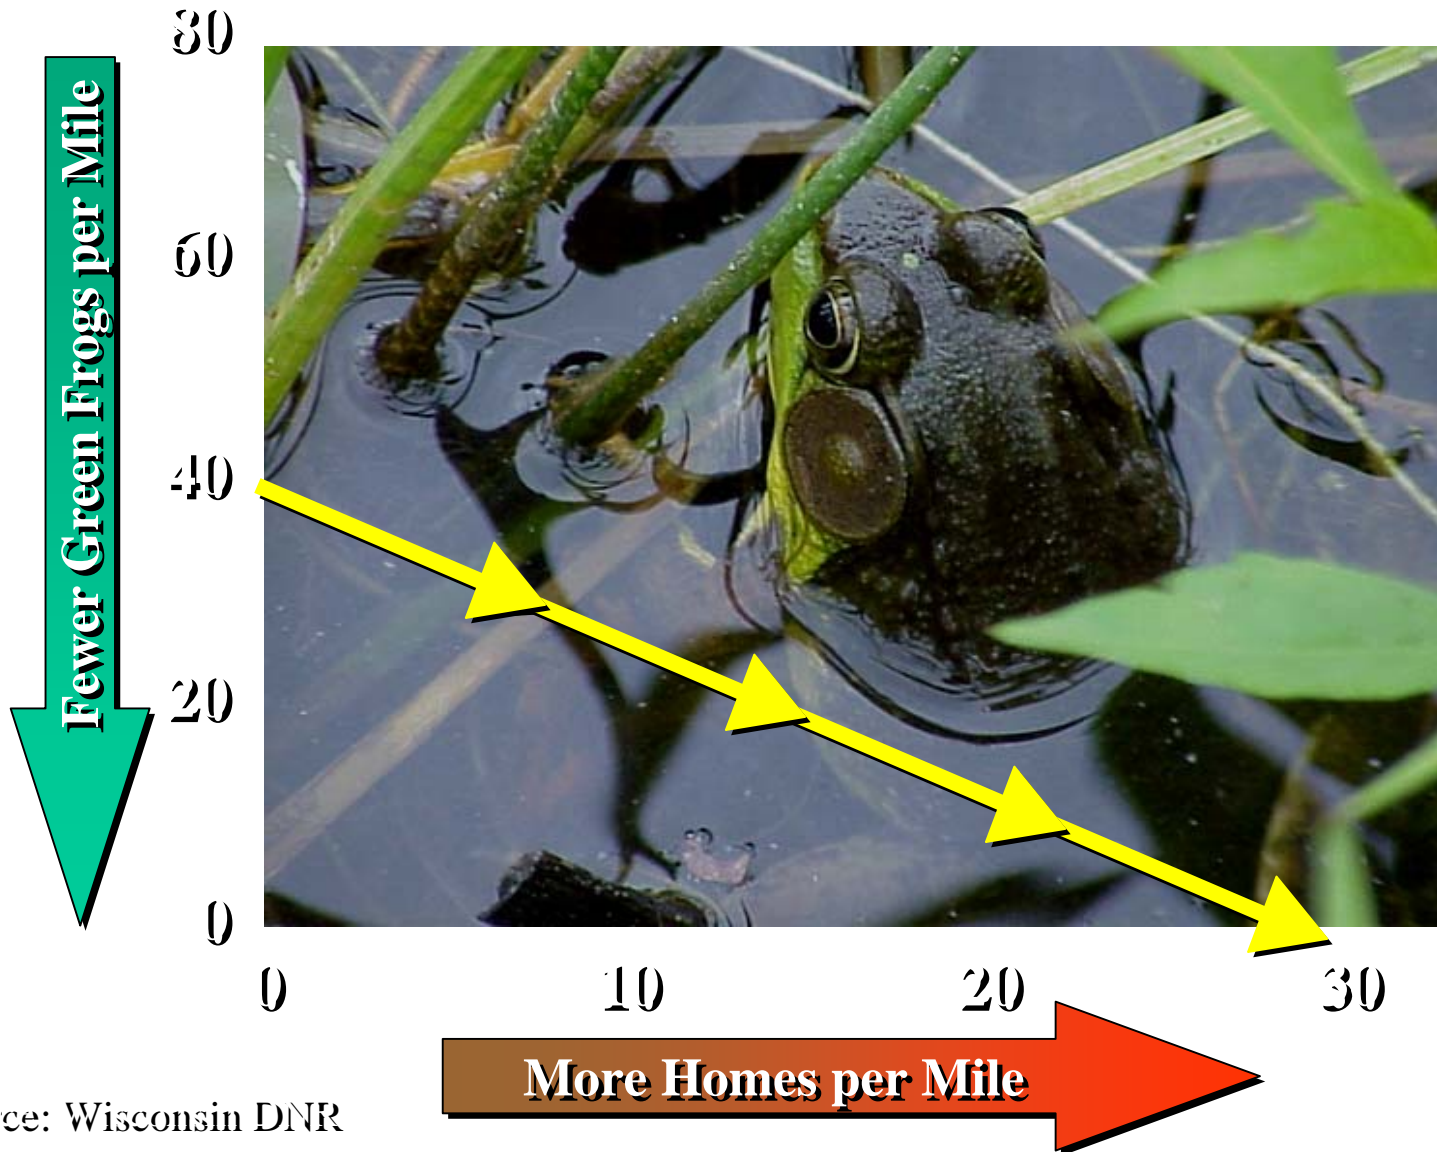

# What's Happened to Songbirds?

Source: Wisconsin DNR

# What's Happened to Frogs?

Source: Wisconsin DNR

*. . . connection between land  
and water . . .*

Mowed shoreline vegetation provides ideal browsing habitat for waterfowl with wide field of view to watch for predators

**Soil erosion / bank  
undercutting from mowing &  
goose grazing**

**Thompson Lake**

Soil loss from mowing  
to water's edge

Coon Lake

### Goose Fence

(Green Snow-fence w/ t-posts)  
-temporarily keep out herbivores

### Coconut EC-Mat

6.5' x 165' roll  
(\$300/roll) 'C7'  
6-8yr life-span

### Biolog

(Coconut-fiber)  
-toe protection

### Aquatic Emergents

Blue Flag Iris, Bur-reed,  
Soft-stem Bulrush

Arrowhead

Thompson Lake

Soft-stem Bulrush

Marsh  
Milkweed

Prairie Cordgrass

Arrowhead

Sweet Flag

Thompson Lake – 1 yr after planting

photo by RCWD

# Permeable Paving

Runoff reduction – up to 70-80%

- Grass pavers
- Paving stones
- Porous asphalt
- Pervious concrete

# Rain Barrels

## Benefits

- Outdoor water use can average 40% of household consumption during the summer

# Aesthetics are important culturally

**THE BUCKETS** by Scott Stantis

# All BMPs Can Be Designed for Aesthetic Appeal:

## BORDERS

Brick Edging

Designed & Installed by:  
**Natural Shore Technologies**

“Bullet” Edging

Trench-Master  
(Edging Trencher)

MOWN  
BORDER

A photograph of a small, shallow stream flowing through a dense forest. The water is clear and reflects the surrounding greenery. A large, fallen tree trunk lies across the stream, partially submerged. The banks are covered in lush green vegetation and rocks. The overall scene is peaceful and natural.

Questions?

# Acronyms

- TMDL: total maximum daily load
- MS4: municipal separate storm sewer system
- WLA: wasteload allocation
- LA: load allocation
- NPDES: National Pollutant Discharge Elimination System
- SWPPP: stormwater pollution prevention plan (construction) or stormwater pollution prevention program (municipal)
- BMP: best management practice
